

## Evidence of GA6 Election Day Hack Continues to Mount

ATLANTA GA – Evidence continues to mount indicating that something is seriously wrong with the unofficial 6<sup>th</sup> District Special Election Runoff [results](#) that have Karen Handel defeating Jon Ossoff by a 52% to 48% margin.

**Ossoff handily won the only verifiable votes cast in the June 20 election.** He dominated those absentee mail-in ballot totals by **64%-36%** even though Handel sent voters absentee ballot applications on at least one of her flyers. **Ossoff also won early voting rounds** by 51%-49%, a margin that meshes exactly with all local Georgia polls. **Having 55% of the ballots already cast, Ossoff cruised into Election Day on a 53-47% lead just as several polls predicted.**

But on Election Day, Georgia's **unverifiable electronic voting system** recorded an inexplicable 58%- 42% victory for Handel. That was enough to reverse the [preliminary results](#) and give the former Secretary of State a 52-48% unofficial victory. No significant event occurred just before Election Day to justify such a dramatic shift in results. Up through Election Day Ossoff employed a massive, growing door to door canvassing team funded primarily by out of state resources.

The dubious Election Day results trigger more anomalies that cast further doubt on how the results could be accurate. For example, Fulton and Dekalb county results show that Ossoff **got a lower percentage of votes with one opponent on June 20<sup>th</sup> than he did against 17 opponents on April 18<sup>th</sup>.** Overall, his June 20<sup>th</sup> percentage now does not even equal April 18<sup>th</sup> Democrat candidate totals that reach about 49%.

**National election integrity advocates who analyzed the results unanimously agree they cannot be correct.** Their concern about hacking of the GA6 election heightened recently after voting machine files were left [exposed](#) indefinitely on the Center for Elections' (CES) web site at Kennesaw State University. **CES prepared the ballots that are installed on every GA6 voting machine.**

Georgia's voting system came under attack before implementation in 2002. Voters cannot verify the electronic record of their ballot, election officials cannot audit results independently for vote count accuracy, and recounts only reprint previous unverifiable results. Several patches have been made and the system has not been fully re-certified since 2008. No Secretary of State has ever specifically certified any Georgia voting system for accuracy according to law. [\[O.C.G.A. § 21-2-279.2\]](#)
